Preface

Our gratitude goes to Allah swt for all His grace and guidance to all of us during this time, so we were able to complete the program and prepare this scientific seminar proceedings. Globalization has some consequences, one of which is a social problem. Social problems which include many fields, such as urbanism, crime, poverty, unemployment, prostitution, gambling, mental disorders, promiscuity, ignorance, and effects of technology, make our position on the confusing state of civilization. It is an irony, because we have a religion and culture that guide and manage our life.

Social problems was exposed in the media and daily conversation topics, makes a lot of people getting frustrated and pessimistic about the future. It is very dangerous to our generation. Psychologically, social problems will make the condition of a nation be stucked in 'era of dark' and the the people became sick (not wellbeing).

As a scientist, it becomes our duty and responsibility to seek solutions to every real social problems around us. In indigenous, every problem faced by a nation ideally solve using local knowledge and local wisdom, which involves the study of religion and culture as thebasic of thinking. We must be able to explain the above phenomena, also offer constructive solutions that people can achieve a good quality of life, physically and psychologically.

Several papers in this proceeding were to offer some ideas on how to find different solutions to solve various social problems. Proceedings are expected to be a glimmer of light that illuminates many social problems thus helping to find solutions to every problem, and enrich the science of psychology as well as bringing insight, especially into the indigenous psychology community and generally into society.
